

PCT Product Applications in Power Generation

Backed by

PCT Knowledge — Our engineering team has earned dozens of worldwide patents related to electrical insulation, composite materials and turbo-generator design.

PCT Experience — Since 1994, we have designed and delivered highly-engineered component solutions, encompassing millions of parts, involving the industry's broadest product line, to nearly all of the world's turbo-generator OEMs.

PCT Proven Performance — With our passionate "first to respond, first to deliver" ethos, and our OEM-qualified and ISO-certified manufacturing facilities in the USA, Europe and Asia, we provide unparalleled response times and total delivered value to our worldwide customer base.

PCT employs a variety of manufacturing techniques including:

- High viscosity vacuum infusion
- Custom machining
- Copper brazing
- Filament winding
- Autoclave molding
- Welding
- Low-pressure compression molding
- Press molding
- Machining (metals & composites)
- Convolute wrapping
- Wet lay-up
- Plating
